Design your own micro:bit Images

Each number represents one of the micro:bit's LEDs.
Try it out yourself – what is the pattern?

```
myImage = '00000:24642:57975:24642:00000'
display.show(Image(myImage))
```

After testing the example code, use the grids to design your own images.

```
myImageA = '_ _ _ _ _ : _ _ _ _ _ :
_ _ _ _ _ : _ _ _ _ _ : _ _ _ _ _'
```

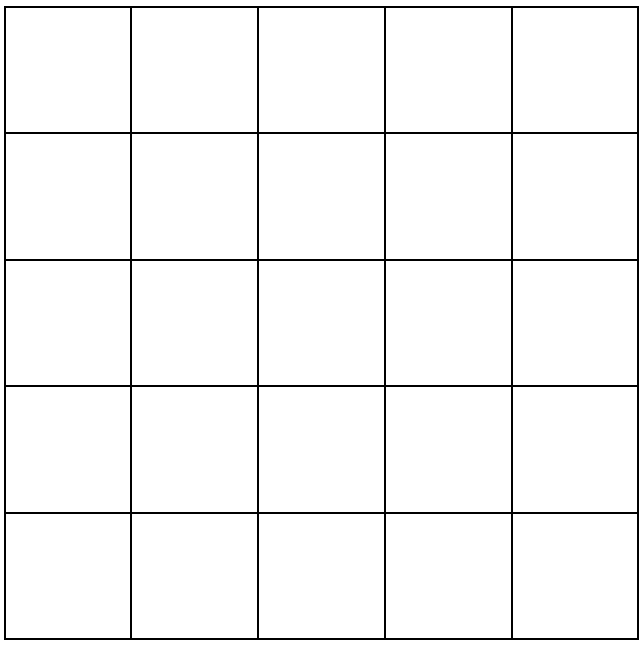
```
myImageB = '_ _ _ _ _ : _ _ _ _ _ :
_ _ _ _ _ : _ _ _ _ _ : _ _ _ _ _'
```

You can make animations by showing a **series of images**, with a **`sleep()`** in between, such as in this example:

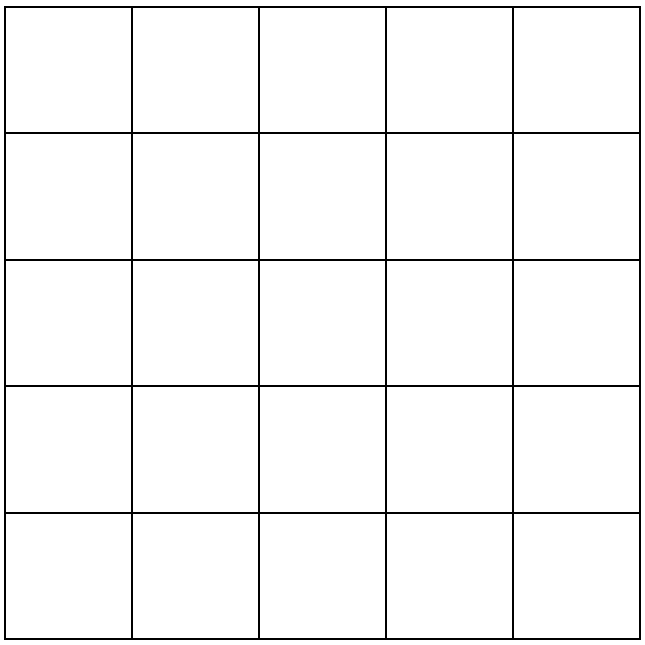
```
imageOne = '11111:22222:33333:44444:55555'
imageTwo = '55555:66666:77777:88888:99999'
display.show(Image(imageOne))
sleep(1000)
display.show(Image(imageTwo))
sleep(1000)
```

Design your own micro:bit Images

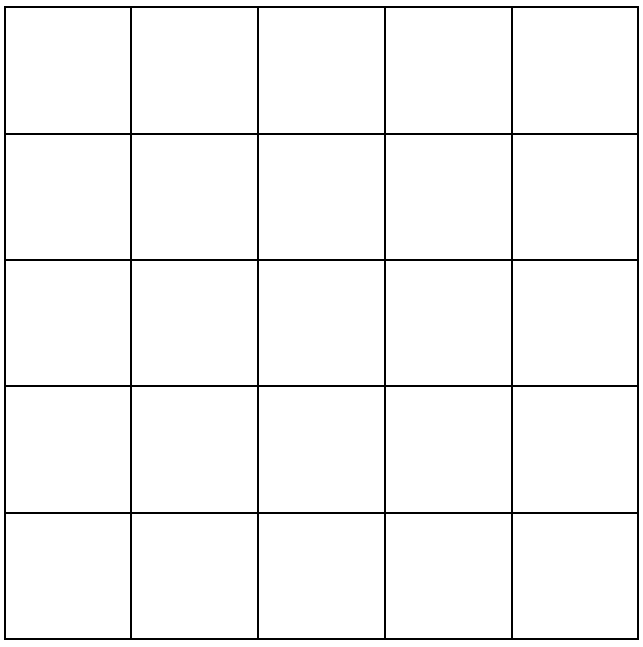
SCIENCEOXFORD



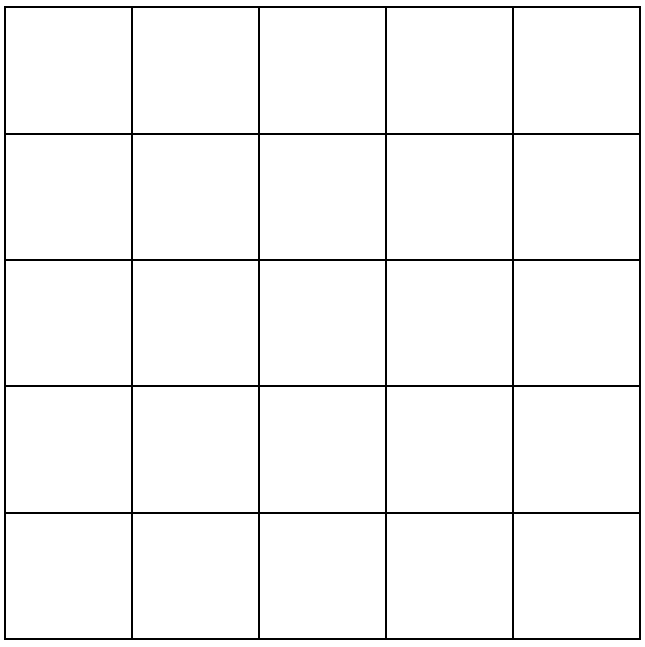
```
myImageC = '_ _ _ _ _ :  _ _ _ _ _ :
_ _ _ _ _ : _ _ _ _ _ :  _ _ _ _ _'
```



```
myImageD = '_ _ _ _ _ :  _ _ _ _ _ :
_ _ _ _ _ : _ _ _ _ _ :  _ _ _ _ _'
```



```
myImageE = '_ _ _ _ _ :  _ _ _ _ _ :
_ _ _ _ _ : _ _ _ _ _ :  _ _ _ _ _'
```



```
myImageF = '_ _ _ _ _ :  _ _ _ _ _ :
_ _ _ _ _ : _ _ _ _ _ :  _ _ _ _ _'
```
